

Weekly Progress Report – Week 1

Duration: 15 Sep – 21 Sep 2025

Project Title: Service Booking System

Team Members: Bhavya, Malhar, Jayesh, Shashank, Pratyush, Akshay, Hitiksha, Bhavika, Anjali

1. Summary of Tasks Completed

The team finalized the project proposal and confirmed the overall scope, objectives, and system architecture.

Technology stack was selected — React.js for the frontend, Spring Boot for the backend, PostgreSQL for the database, and Docker for deployment.

Roles were distributed among team members and the GitHub repository was initialized with folders for frontend, backend, and documentation.

Initial documents such as the Project Proposal and System Design Overview were prepared.

2. Roadblocks / Issues Faced

Minor delays in communication during role assignment and technical setup.

Uncertainty in integrating Docker with Spring Boot setup for local testing.

3. Upcoming Tasks / Plan for Next Week

- Prepare the Requirements Specification Document (BRD).
- Create API specification drafts.
- Begin Spring Boot backend structure and database schema design.
- Develop wireframes for main interfaces (Customer, Provider, Admin).
